California's Drought, The IPCC, and Risk: Linkages and Implications

Hosted by UCLA Extension

Carl Southwell, DPPD, President/Consultant, InsureTech, Inc.

Arguably, the most important risk management problem facing the world today is climate change, but for California, the most important risk management problem is its current drought!

Please join **Carl Southwell** as he presents an engaging talk that explores the causes, extent, and impacts of California's current drought, its linkages to global climate change, uncertainties, and potential responses as presented in the most current Intergovernmental Panel on Climate Change (IPCC) synthesis, and the potential for local, risk-based mitigations.

About the Speaker:

Dr. Southwell is president of InsureTech®, Inc., a risk management consultancy, and of the Risk and Policy Institute, a nonprofit that studies disaster risk and its public policy implications.

In various capacities, he has served numerous businesses, governments, and nonprofit entities. He has also worked as an insurance and re-insurance pricing actuary, authored many insurance publications, and wrote and edited actuarial computer programs.

He earned his Doctor of Policy, Planning and Development from the University of Southern California with a dissertation entitled, *A Robust Model for Disaster Risk and Decision Analysis*, and his bachelor's degree from the University of Chicago.
